

ABSTRAK

Sistem Informasi Pengolahan Data Nilai Siswa Berbasis Web merupakan suatu sistem yang memberikan informasi laporan keaktifan siswa secara online yang berupa laporan nilai serta informasi siswa yang bersangkutan dengan berbasis web, sehingga membantu kecepatan dan kualitas dalam penyampaian informasi. Hasil pengamatan dan wawancara menunjukkan permasalahan yang terjadi dalam pengolahan nilai di MTS Ma'arif 1 Punggur dimana masih dilakukan secara konvensional oleh staff sekolah. Menanggapi permasalahan tersebut, penulis merancang sistem informasi berbasis web dengan metode System Development Life Cycle (SDLC) dengan pengujian Black Box Testing. Hasil dari pengembangan ini yakni *website* yang dapat mempercepat dan mempermudah kinerja staff Tata Usaha (TU) dalam pembuatan laporan serta pengolahan data nilai siswa di sekolah. Adapun kekurangan dari pengembangan ini yakni masih berbasis web dan online. Penulis berharap agar peneliti maupun pengembang selanjut dapat melengkapi fitur yang ada.

Kata Kunci: Sistem Informasi; Website; Nilai Siswa

ABSTRACT

Web-Based Information System of Student Grading is a system that provides online information of student activity report in the form of grade reports and student information via website to improve the acceleration and quality in delivering information. The results of observations and interviews showed problems that occurred in grading students at MTS Ma'arif 1 Punggur which were still conducted conventionally by school staff. In regards to these problems, the author designed a web-based information system using System Development Life Cycle (SDLC) method with Black Box Testing. The result of this development is a website that accelerates and eases the performance of administrative staff in reporting and processing student grade data at school. The disadvantage of this development is that it is still web-based and online. The author suggests that further researchers and developers can complete the existing features.
