The results showed a significant improvement in the listening skills of the experimental group, based on the result of hypothesis testing for first hypothesis the result of significance value is $<0.001 < 0.05$. It means that H_a accepted meanwhile H_o rejected. Then the second hypothesis the significance result of Two-Sided P is 0.001, $0.001 < 0.05$, therefore it can be deduced that H_a is accepted and H_o rejected.
