CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

In this chapter, the researcher concludes the result of analysis types of deixis in utterances that are produced by the main character (Woody) containing deictic expressions and the meaning of the word deixis according to contextual and lexical meaning in Woody's utterances. The conclusion is the answer to the research question by seeing the result of the discussion.

By seeing the result of the analysis and interpretation of deixis types in Woody's utterances, the researcher can give a conclusion. The results of this research indicate that there are 153 utterances produced by the main character (Woody) that contain deictic expression and have contextual and lexical meaning based on the deixis used in whole utterances. The researcher found 3 types of deixis. There are 144 utterances are containing personal deixis, 6 utterances containing spatial deixis, and 3 utterances containing temporal deixis. Therefore, it can be concluded that personal deixis is the most dominant of all the types of deixis and the researcher found 153 utterances that have the textual and contextual meaning in each of the utterances.

Based on the result, It can conclude that semantic takes an important part in the study of meaning. This is the way to solve the problem that often occurs in communication such as dissimilar interpretation of meaning in the utterance that related to the context and situation.

B. Suggestion

The suggestion is expected to make better in the future. The researcher gives some suggestions for the students, the lecturer, and the further researcher. The explanation is explained as followings:

1. Students from English Department

Students need to increase their knowledge and understanding of deixis because this is important to students from the English department that learning discourse especially in pragmatic, so students can follow the course better and more interesting in the future.

2. Further Researcher

The researcher suggests the next researchers develop this research so that this research will be more complete. The researcher considers that there are still shortcomings in this research, which is that the researcher admits that it is still unclear in describing the data obtained from the research that has been done. The researcher also hopes that in further research it can analyze other type of deixis with different expert's theories. It is because of in this research, the researcher only focuss on three type of deixis such as personal, spatial, and temporal deixis.
